

1)

POST: used to create new resources that are parts of a parent resource.

GET: used to read a representation of a resource
PUT: used to update, or PUT to a known resource URI with the request body containing the newly-updated representation of the original resource.

PATCH: used to modify resource. This resembles PUT, but the body contains a set of instructions describing how a resource currently residing on the server should be modified to produce a new version. This means that the PATCH body should not just be a modified part of the resource, but in some kind of patch language like JSON Patch or XML Patch.

DELETE: used to delete resource
